PROFILE

Lead product designer with 10+ years in design and 9 on products, most of them in payments, crypto and health-tech. I build design systems and processes that make the whole team faster: at PayTeria large data screens take 5–10 minutes to assemble, and at Payler product managers and analysts built interfaces themselves. Often the only designer on the team, including through CoinsPaid's growth from 13 to about 160 people.

EXPERIENCE

Lead Product Designer, PayTeria — Apr 2025 – Nov 2026
Payment gateway, checkout and anti-fraud products · payteria.com

- Sole designer for three products with separate engineering teams, in a company of about 100.
- Designed a checkout builder (30 blocks, 10 brand themes, 3 languages) used for rollouts in 4+ regions; the checkout engineer took my working prototype into production.
- Designed anti-fraud dashboards, a rule builder and money-critical back-office flows.
- Rebuilt the design system: large data screens now take 5–10 minutes to assemble.

Lead Product Designer & Art Director, Payler — Oct 2021 – Mar 2025
Payment processing · payler.com

- Sole designer for over a year across four back offices and multi-region payment forms.
- Built a compact design system for ~10 engineers; PMs and analysts assemble interfaces from it.
- Hired and mentored a second designer, moving them from marketing to product work.
- Moved marketing sites to Tilda and Framer so updates no longer needed engineers.

Founding Product Designer, WeatherWell — Nov 2019 – Sep 2021
Health-tech app · weatherwell.app

- Only designer in a 4-person founding team, with equity: designed the MVP and investor materials.
- Ran UserTesting research (200+ hours) that drove the pivot from weather app to health tracker.

Senior Product Designer, Art Director, Mobile PO, CoinsPaid — Aug 2019 – Dec 2020
Crypto processing · coinspaid.com

- Sole product designer as the company grew from 13 to ~160; designed the first platform and wallet.
- Designed the CoinsPaid logo mark and led art direction; hired graphic designers and illustrators in place of agencies, and trained a designer to take over product work before I left.
- As Mobile Product Owner, wrote the tracking plan and set up Amplitude for the wallet.

Product Designer, own and freelance projects — Sep 2018 – Aug 2019

- Designed Sofy, my own social app for meeting people around events, with the same friends as AMO; freelance mobile and web projects; product and analytics courses.

UX/UI Designer, Aprofita — Oct 2017 – Sep 2018

- Designed an in-app web store for iOS and Android, plus ad creatives and marketing videos.

UX/UI Designer, Ultimate Guitar — May 2017 – Oct 2017
Guitar tabs and chords apps · ultimate-guitar.com

- Built and documented the mobile design system for a full redesign of the apps on iOS, Android and React Native.
- Worked on the apps' launch for the Australian market; drew reusable components and brand visuals.

SKILLS

Product: hypothesis testing, user research, usability testing, A/B testing, tracking plans, product metrics
Design: B2B and B2C product design, design systems, multi-brand theming, prototyping, accessibility
Payments: checkouts, multi-provider payment forms, back offices, anti-fraud tooling
Collaboration: stakeholder management, cross-functional teams, mentoring, hiring
Tools: Figma, AI agents (Claude Code), Amplitude, HTML and CSS, working knowledge of React
Languages: English (B2), Russian (native)
